

**Instant Messaging that Adds
More Value and Accuracy to Your Business**

You can replay the voice messages recorded by the Telephone Answering Machine (TAM) function*, or have recorded messages automatically transferred by phone or e-mail to a designated party. You can receive messages at your PC or cellular phone, and you can create your own greeting message (WAV file).

* PC-Phone Only

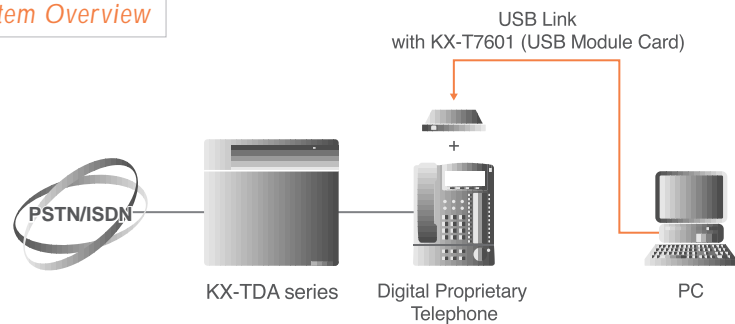

You can record a conversation automatically or manually onto the hard disk of your PC. (2-way recording)

Voice Memo makes it easy create a recorded voice memo any time during a conversation, and then send it to someone by e-mail. You can also create a Text Memo during a conversation, and send it to someone by e-mail or use it as a personal reminder.

You can use a text memo as a personal reminder (Reminder Memo) when a party you had tried to contact earlier is returning your call. When that person calls back, the text memo pops up on your screen to remind you of the message you left.

System Overview

The KX-T7601 must be attached to the KX-T7636 or KX-T7633 for PC-Phone and PC-Console use.

| | | |
|------------|----------------|---|
| KX-TDA0300 | PC-Phone | Requires payment of a fee. Five licenses are provided on each CD-ROM, allowing the use of Voice Mail functions (TAM, Message, E-mail). |
| | PC-Phone Light | Bundled free of charge with the USB Port. This software does not provide Voice Mail functionality. The Voice Mail function can be used for a trial period of 90 days. |
| KX-TDA0350 | PC-Console | |

- Logging-in to the Utility
- Operator Registration*
- E-mail Registration
- Administrator Registration*
- Extension Number
- Tenant*
- DDI Registration
- Address Type Registration
- Wave Device

* PC-Console only

Panasonic

**PC Phone
PC Console**

The Easiest Connection
between
Computer and Telephone

Panasonic enables you to communicate more efficiently with your customers and business relations than ever, with the PC Phone and PC Console software applications. PC Phone and PC Console integrate your phone system with a database. The caller's ID and other information automatically pop up on your PC's display before you take the call. This makes it easy to give your customers a level of service that reflects well on your company. And PC Phone and PC Console provide easy access to PBX features, a call log capability, and a host of other productivity-enhancing features.

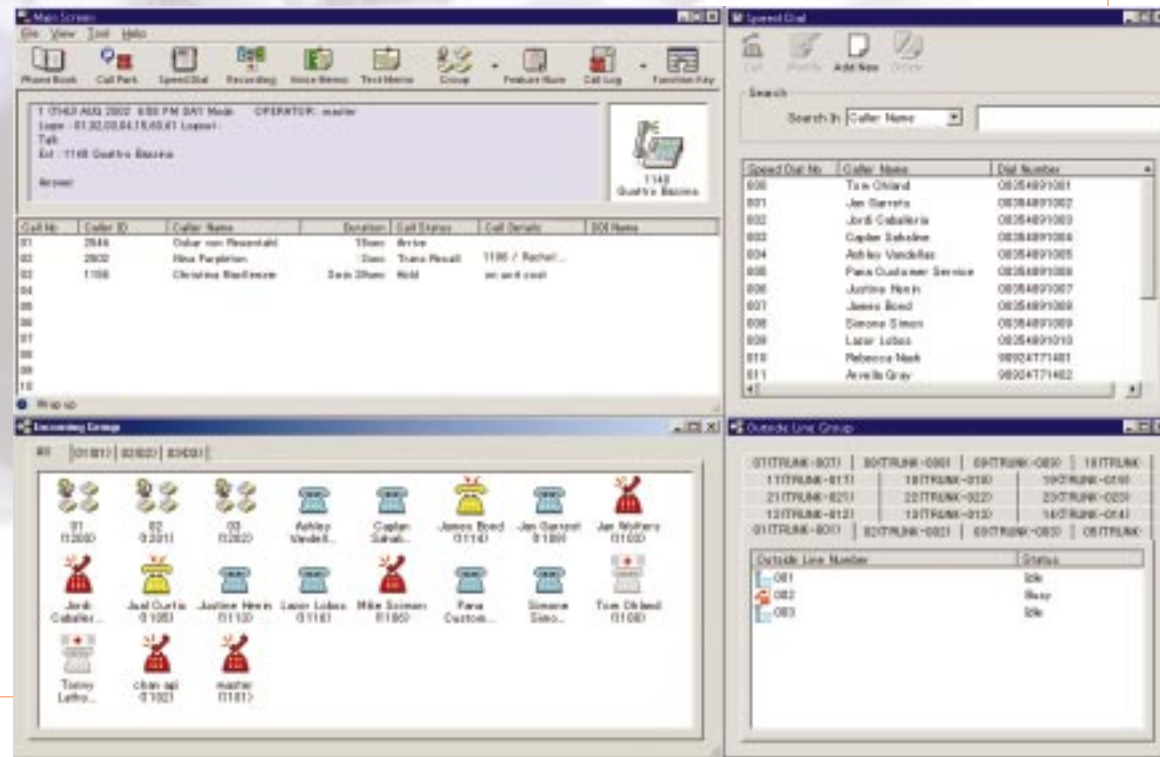

The operator is often the first contact person for your customers, so it is vital that the operator has access to the customer database and an overview of your staff available on the screen. The easier operator can transfer the customer to the correct person, the more professional your organisation looks and the more efficient you operate. PC Console gives your telephone operators a powerful tool for improving call-handling efficiency and customer service.

PC Phone and PC Console:

Software that Turns Your Digital Phone System into a Powerful Communication Tool

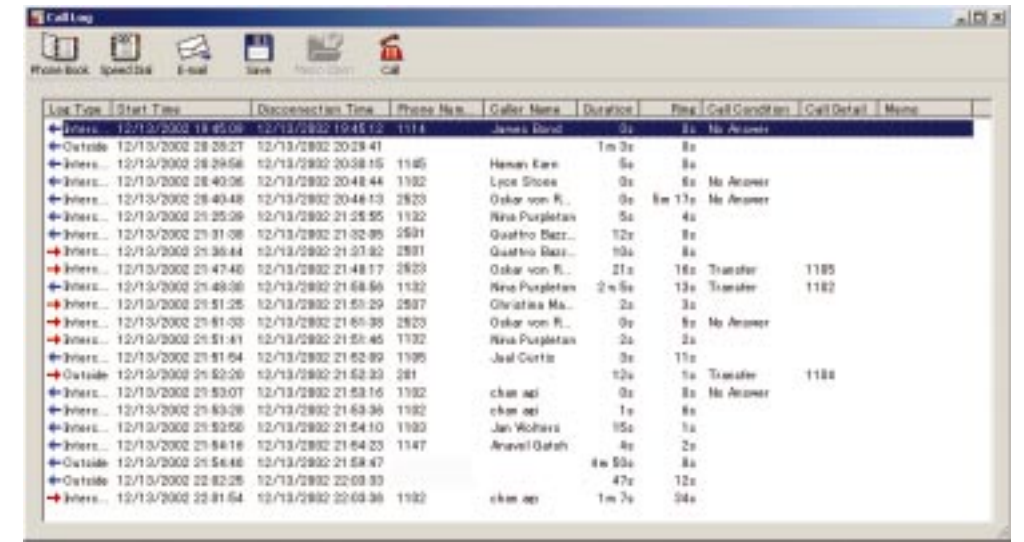

A Powerful and Essential Operator Tool – PC Console

PC Console displays information about a caller on the PC screen even before the operator takes the call. This makes it easy for operators to prioritise incoming calls, so important customers are never kept waiting. With one glance at the screen the operator can see which extensions are busy and which are free, and transfer calls and perform other duties using simple drag-and-drop and point-and-click operations from their computer screens.

Makes Operation Easy

- ▶ User friendly call control by a simple mouse click or keyboard operation
- ▶ PBX System Error Notification
Should a PBX system error occur, notification is automatically sent to an e-mail address that you have specified.

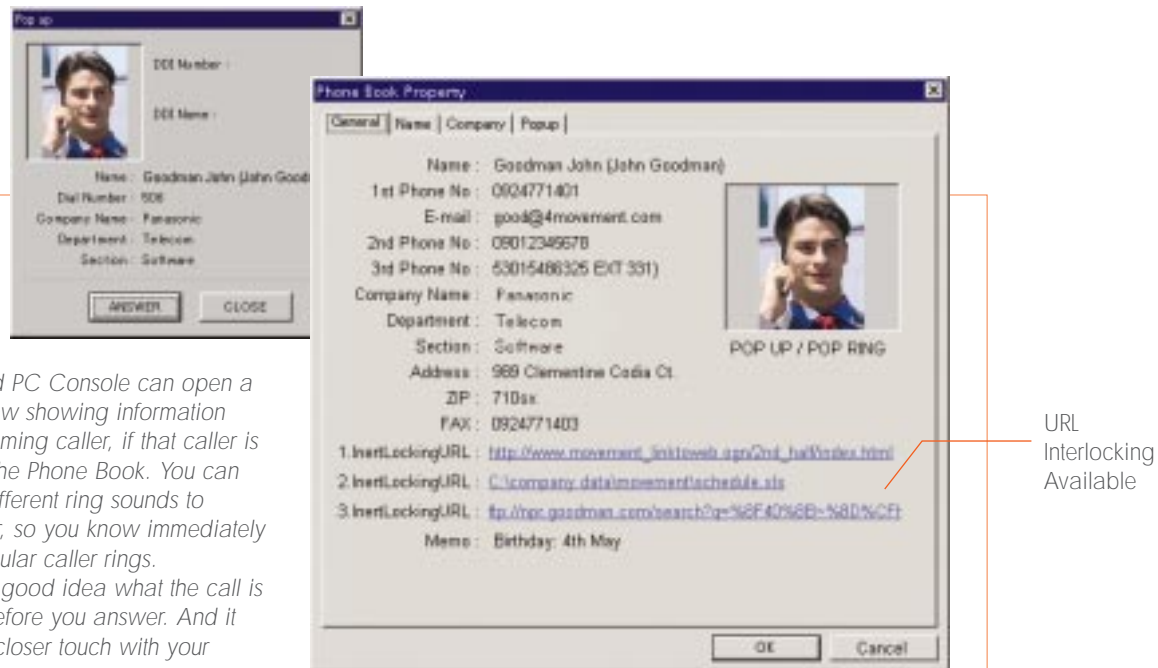

[Call Log]

- ▶ Dial easily through your database
You can use your Microsoft Outlook® Address Book instead of the phone book provided by PC Phone and PC Console. Using the "Import" function, PC Phone or PC Console quickly accesses data in your Outlook address books for fast, easy dialling. You can import and export phone book data using CSV (Comma Separated Value) files, to exchange data with software programs such as Microsoft Excel.
- ▶ PBX System Speed-Dial Access
PC Phone and PC Console can access speed-dial numbers and the corresponding caller names stored in your PBX, for quick, easy dialling. Each time you launch PC Phone or PC Console, data is automatically updated to reflect any changes made to data in your PBX.
- ▶ Call Log Record and History
The Call Log function refers to a list of incoming and outgoing calls, along with information such as caller names and phone numbers, call condition, and duration.

Letting You Keep Pace with Leading-edge Technology – Integration with Network Camera

Higher Productivity, Greater Customer Satisfaction

PC Phone and PC Console can open a pop-up window showing information about an incoming caller, if that caller is registered in the Phone Book. You can also assign different ring sounds to different caller, so you know immediately when a particular caller rings. It gives you a good idea what the call is about even before you answer. And it keeps you in closer touch with your customers.

URL Interlocking Available

▶ Network Camera

You can register a URL or IP address to link it to a caller ID or extension number. Then, when a call from that number comes in, your browser will automatically pop up and the Network Camera image will appear on your PC monitor. If cameras are set up to capture your face and the caller's face, you can use the system like a teleconference. You can also combine it with an interphone and monitor people who ring your doorbell, or use it in many other applications in warehouses or conference rooms.
