

Your call is recorded...

In today's business whether it is for training purposes, legal issues or for instance financial transactions your call is being recorded. You are able to have this functionality for your business.

The Trunk Recorder is an easy and affordable hardware recording device. The Trunk Recorder records every single ISDN connection. After the recording is finished, the conversation is stored and is accessible via a secure web page. By means of this webpage, you are able to search for recordings, listen to recordings, save recordings, forward the recordings by email or remove the recordings.

Screenshot of the webpage with recordings

The screenshot shows a web browser window displaying the Trunk Recorder interface. The page title is "Gespreks-Recorder - Microsoft Internet Explorer". The address bar shows "http://10.0.100.154/trunkrecorder/". The main content area is titled "Trunk Recorder" and "All Recordings". It features a table of recordings with columns for Date/Time, Direction, Internal, External, and Size. Each row includes links for play, save, and delete. A sidebar on the left shows a navigation menu with categories like System Settings, PBX Settings, and Manual. A "Select Month" dropdown is visible on the right side of the table.

Date/Time	Direction	Internal	External	Size
